----------------------------	-------------------	-----------------

Name of Agency

STATE SUPPORT SPECIAL FUNDS

Education Enhancement Funds - The state supported special funds for the Forest and Wildlife Research Center includes Educational Enhancement funds which are generated from 1% Mississippi sales tax dollar.

Capital Expense Fund – The state supported special funds for the Forest and Wildlife Research Center includes funding for capital expense needs, repair and renovation of state-owned properties and specific projects authorized by the Legislature. These funds are derived from a distribution of the fiscal year unencumbered ending General Fund cash balance as set out in statute.

FEDERAL FUNDS

Federal funds are appropriated annually by the McIntire Stennis cooperative forestry research program.

OTHER SPECIAL FUNDS

The special funds of the Forest and Wildlife Research Center consist of self-generated revenue through sales of timber associated with the Forest and Wildlife Research Center.

PROGRAM NARRATIVE

Program Data Collected in Accordance with the Mississippi Performance Budget and Strategic Planning Act of 1994 (To Accompany Form MBR-1-03)

MS State Univ - Forest & Wildlife Research Center 1 - Research Name of Agency Program Name

I. Program Description:

The Forest and Wildlife Research Center (FWRC) was established in 1994 by the Mississippi Legislature in recognition of the central role that development and wise use of natural resources plays in the Mississippi Economy. Since its establishment, scientists in the FWRC have worked towards the goal of environmentally sustainable natural resource management and utilization in Mississippi. The FWRC provides the only research program in Mississippi focused on managing and utilizing the forest, wildlife, fisheries, and water resources while protecting and enhancing the natural environment associated with these resources. The FWRC supports research that encourages the growth and development of the forest products manufacturing industries, including furniture. Natural resources provide opportunities for the state's citizens in recreation and jobs, and in 2018 contributed over \$13.1 billion in economic impact to the state.

II. Program Objective:

Demands for research information and technical assistance placed on the units that comprise the FWRC have increased at a rapid rate. Growing demands for science-based information are attributable to changes in the economics of timber production; conversion of agricultural land to forest; urban sprawl; increased fuel and energy costs; changes in capital requirements for manufacturing facilities; changes in import/export markets; expanding public interest in managing forest lands for wildlife habitat and/or recreation, and emerging threats associated with invasive species and plant and animal pathogens.

Scientists in the FWRC were the first in the nation to develop a comprehensive, spatially-explicit inventory of forest resources in the state. Forest inventory software and methodology developed by FWRC are currently being used by the Mississippi Forestry Commission and Mississippi Development Authority Institute to inform siting of sawmills and pellet plants and attract new industries to the state. A forest production/bio-energy mill location and decision support system based on state's county-level forest inventory and geo-spatial information has been developed and used by numerous industries desiring to locate to Mississippi. Industries wishing to locate to the state use the software developed by the FWRC to determine the ideal location to build a facility, based on availability of the resources and access to transportation networks. Models and software developed by Forestry and Sustainable Bioproducts faculty have been used by economic developers to inform site selection for recruiting new industry to the state including the new Mission Forest Products mill in Corinth; the new Enviva pellet mill in George County; and the expansion of the Vicksburg Forest Products mill. This software has and will continue to aid economic development decisions for state planners and industry.

Hunting, fishing, and wildlife-related recreation is an economic engine for Mississippi. Deer hunting alone can contribute up to \$1B annually to the Mississippi economy and supports 26,000 - 38,000 full- and part-time jobs. About 150,000 hunters spend over 3 million recreational days annually harvesting nearly 200,000 deer. However, an emerging disease threatens this important resource and associated recreation and economic activity. Mississippi is on the geographic southeastern leading edge of the spreading Chronic Wasting Disease (CWD) epidemic. Scientists in the Forest and Wildlife Research Center have partnered with the Mississippi Department of Wildlife, Fisheries and Parks, and the MSU College of Veterinary Medicine Diagnostic Lab System to respond to this new threat with surveillance, diagnostics, research, and policy development. Detection of this epidemic while geographically limited and at low prevalence, provides a unique opportunity to apply a science-based response and proactively get out in front with; development and testing of containment strategies, regulatory policies, hunter education, and human health guidelines. The MSU Deer Lab within WFA is a nationally trusted source of expertise on deer ecology, movements, genetics, and management and is playing a key role in coordinated response.

Forest lands totaling nearly 20 million acres provided \$1.13 Billion in production for 125,000 Mississippi forest landowners in 2019. These forests produce myriad of forest products including dimensional lumber, veneer, pallets, and paper products. Scientists in the FWRC are developing a multitude of new sustainable bioproducts including; cross-laminated timbers, bio-oil, renewable liquid transportation fuels, pellet binders, graphene-based composite materials, and lignin-based nanoparticles. These new value-added wood products will expand markets, support economic development, and increase profitability for forest landowners.

III. Current program activities as supported by the funding in Columns 6-15 (FY 2022 & FY 2023Increase/Decrease for continuations) of MBR-1-03 and designated Budget Unit Decisions columns of MBR-1-03-A:

NARRATIVE 2023 BUDGET REQUEST

MS State Univ - Forest & Wildlife Research Center (448-00)

Name of Agency

The Forest and Wildlife Research Center (FWRC) was established in 1994 by the Mississippi Legislature in recognition of the central role that development and wise use of natural resources plays in the Mississippi Economy. Since its establishment, scientists in the FWRC have worked towards the goal of environmentally sustainable natural resource management and utilization in Mississippi. The FWRC provides the only research program in Mississippi focused on managing and utilizing the forest, wildlife, fisheries, and water resources while protecting and enhancing the natural environment associated with these resources. The FWRC supports research that encourages the growth and development of the forest products manufacturing industries, including furniture. Natural resources provide opportunities for the state's citizens in recreation and jobs, and in 2018 contributed over \$13.1 billion in economic impact to the state.

Demands for research information and technical assistance placed on the units that comprise the FWRC have increased at a rapid rate. Growing demands for science-based information are attributable to changes in the economics of timber production; conversion of agricultural land to forest; urban sprawl; increased fuel and energy costs; changes in capital requirements for manufacturing facilities; changes in import/export markets; expanding public interest in managing forest lands for wildlife habitat and/or recreation, and emerging threats associated with invasive species and plant and animal pathogens.

Scientists in the FWRC were the first in the nation to develop a comprehensive, spatially-explicit inventory of forest resources in the state. Forest inventory software and methodology developed by FWRC are currently being used by the Mississippi Forestry Commission and Mississippi Development Authority Institute to inform siting of sawmills and pellet plants and attract new industries to the state. A forest production/bio-energy mill location and decision support system based on state's county-level forest inventory and geo-spatial information has been developed and used by numerous industries desiring to locate to Mississippi. Industries wishing to locate to the state use the software developed by the FWRC to determine the ideal location to build a facility, based on availability of the resources and access to transportation networks. Models and software developed by Forestry and Sustainable Bioproducts faculty have been used by economic developers to inform site selection for recruiting new industry to the state including the new Mission Forest Products mill in Corinth; the new Enviva pellet mill in George County; and the expansion of the Vicksburg Forest Products mill. This software has and will continue to aid economic development decisions for state planners and industry.

Hunting, fishing, and wildlife-related recreation is an economic engine for Mississippi. Deer hunting alone can contribute up to \$1B annually to the Mississippi economy and supports 26,000 – 38,000 full- and part-time jobs. About 150,000 hunters spend over 3 million recreational days annually harvesting nearly 200,000 deer. However, an emerging disease threatens this important resource and associated recreation and economic activity. Mississippi is on the geographic southeastern leading edge of the spreading Chronic Wasting Disease (CWD) epidemic. Scientists in the Forest and Wildlife Research Center have partnered with the Mississippi Department of Wildlife, Fisheries and Parks, and the MSU College of Veterinary Medicine Diagnostic Lab System to respond to this new threat with surveillance, diagnostics, research, and policy development. Detection of this epidemic while geographically limited and at low prevalence, provides a unique opportunity to apply a science-based response and proactively get out in front with; development and testing of containment strategies, regulatory policies, hunter education, and human health guidelines. The MSU Deer Lab within WFA is a nationally trusted source of expertise on deer ecology, movements, genetics, and management and is playing a key role in coordinated response.

Forest lands totaling nearly 20 million acres provided \$1.13 Billion in production for 125,000 Mississippi forest landowners in 2019. These forests produce myriad of forest products including dimensional lumber, veneer, pallets, and paper products. Scientists in the FWRC are developing a multitude of new sustainable bioproducts including; cross-laminated timbers, bio-oil, renewable liquid transportation fuels, pellet binders, graphene-based composite materials, and lignin-based nanoparticles. These new value-added wood products will expand markets, support economic development, and increase profitability for forest landowners.

FWRC Research Impacts Affect All Mississippians

• Industry – Forest and Wildlife Research Center scientists devised a dual system treatment for railroad ties to extend their service life from 7 years to 25 years. Today nearly a million ties are dual-treated and installed annually by Class 1 railroads saving the industry millions of dollars. There are more than 400 million crossties in use, with an estimated 23 million replaced each year. FWRC scientists are working to improve economic returns to forest landowners by finding better ways to value each piece of lumber through non-destructive testing, enhanced durability, and developing new uses for cross laminated timber building materials. Their work on design of timbered bridges provides reliable and cost-effective engineered solutions for the more than 540 bridge closures on rural roads requiring high-load, low volume bridges. Logging firms are an important component in moving

NARRATIVE 2023 BUDGET REQUEST

MS State Uni	iv - Forest &	k Wildlife	Research	Center	(448-	00)

Name of Agency

the timber from the woods to the mills. Logging firms employed 5606 individuals and paid \$248 million in wages. By monitoring the effects of changes in the wood supply system, scientists are developing management tools for the wood supply system that will maximize revenue and reduce costs.

- Producers—Increased feed costs and competition from foreign imports have contributed to a 50% contraction in the catfish industry over the past 10 years. Surface water acreage for catfish production declined from 70,000 acres in 2009 to 35,100 acres in 2020, representing a loss of 35,000 acres. However, remaining producers experience increased production and profitability associated with intensive production and vaccination technologies developed by Mississippi State University. Among other challenges faced by the catfish industry, depredation by fish-eating birds continues to impact profitability. Working in cooperation with USDA-Wildlife Services, FWRC scientists have developed survey methodology, energetic budgets, and economic models to quantify and help mitigate depredation losses from cormorants, white pelicans, and wading birds. Row crop producers are also struggling with wild pigs which wreak havoc across the south, causing major crop and environmental damage. It is estimated that wild pigs are costing Mississippi producers \$18.5 million/year in crop damage. Research by scientists in the FWRC is quantifying the extent and magnitude of economic losses to swine, effects of landscape structure on pig movements, and best practices for control and eradication of pig populations. Scientists, along with personnel in Extension and USDA APHIS, are now helping farmers and landowners across the state by offering workshops on wild pig trapping.
- Landowners Scientists in the FWRC have developed web-based growth and yield models for southeastern loblolly pine and bottomland hardwood that permit landowners of all types, forestry students and the general public to simulate stand growth under a range of conditions. These tools allow for real time adjustments to inventory databases as an alternative to costly remeasurements in the field. These research findings also enable landowners to better predict future conditions in their forest stands and thus improve their financial planning. In addition to lumber and other wood products, Mississippi's 20 million acres of forests produce myriad environmental goods and services, including clean water, pollination, carbon sequestration, and wildlife habitat. Emerging carbon markets provide an opportunity for Mississippi forest landowners to monetize environmental services that provide a public good. FWRC scientists are developing decision support tools and outreach products to help forest landowners understand these markets and weigh the costs and benefits of harvest deferral for carbon credits.
- Homeowners Homeowners spend \$5 billion annually replacing deteriorated wood. Scientists in the Forest and Wildlife Research Center have developed a nondestructive test method to measure the loss of mass and compression strength without harming the wood product, saving homeowners time and replacement cost. FWRC scientists working at the Dorman Lake Research Test Plots have conducted more than 6 decades of research on wood product durability. The results of durability testing at this site are influential; add value to numerous industries including electric/utilities, railroad, home building, and bridges; and have led to development and commercialization of new wood preservative systems that are both environmentally benign and effective at preventing wood decay.
- Recreationalist White-tailed deer hunting generates over a billion dollars in economic activity each year in the state. Research in the Forest and Wildlife Research Center has found that protecting young bucks improves herd health and creates a better hunting experience. Protecting young bucks is important because they father nearly a third of all fawns. Protecting younger bucks not only improves the health of the deer population but also improves the buck-to-doe ratio, which shortens the breeding season. A new study is tracking wild deer to determine antler size and growth rates. Understanding antler development under field conditions helps provide a scientific basis for setting hunting regulations, especially related to antler restrictions and harvest rates for younger bucks. Chronic wasting disease (CWD) is more likely to affect older and male deer. Strategies for controlling the spread of CWD involve maintenance of lower populations and younger age distributions. FWRC scientists are working with MDWFP to formulate harvest strategies that balance the competing objectives of quality deer management and CWD control.

The FWRC FY2023 Legislative Budget Request reflects the need to restore 2.5 faculty FTE and provide salary adjustments for SREB salary level progress
